Descriptive analysis summarized total deposits, accounts, and banking offices. Metropolitan areas contributed approximately 52.4% of total deposits. Rural areas recorded the highest number of accounts.

The comparison between population groups showed differences in deposit amounts and account numbers. Metropolitan areas had higher deposit totals, whereas Rural areas had more accounts. This indicates differences in average deposit size across population groups. Further investigation is required to understand the reasons.

The historical data showed an increasing deposit trend from 2019 to 2026. Based on this trend, deposits may continue to increase in future periods. Forecast results should be interpreted as estimates rather than guaranteed outcomes.

Banks could explore opportunities to improve deposit services in Rural areas and investigate states with relatively low deposit totals. They may also develop strategies to increase customer participation and monitor deposit growth across population groups.

A Report is a collection of data, charts, tables, and visualizations that presents information clearly and helps people understand results.
In Power BI, a Report includes:
- Cards: Show important numbers (Total Sales, Total Customers).
- Bar Chart: Compare categories.
- Line Chart: Show trends over time.
- Pie Chart: Show percentage distribution.
- Slicers: Filter data interactively.
- Tables: Display detailed information.

A bank report can show:
- Total deposits
- Total customers
- Deposits by population group
- Deposits by state
- Deposit trends

Purpose: Help ban
